

INSTALLATION: Always hold the TrädCase on the sides! DO NOT PUSH ON THE TOP OR BOTTOM WHERE THE WOOD HAS BEEN CUT OUT FOR THE CHARGER AND EARPHONES...

To mount your iPhone in the **TrädCase**, put your iPhone facedown on clean surface. First place the right-top side of the iPhone at an angle (step 1) into the top half of the **TrädCase**. (Inserting the iPhone at an angle is to insure that the **sharp edge of the ringer on/off switch does not catch** and damage the material liner of the **TrädCase**).

STEP: 1

Next rotate the iPhone to the right (step 2) so that it is properly aligned with the **TrädCase** and **holding the TradCase on the sides very very SLOWLY** insert the iPhone all the way into the **TrädCase**. When you get **near the wood buttons for the volume go extra slow** so the ringer on/off switch does not catch on the black material !

STEP: 2

Finally, take the bottom half of the **TrädCase** and slide it over the bottom half of the iPhone until it snaps in place (step 3).

STEP: 3

Note: Do NOT bend the TrädCase and do NOT press the cutout wood button controls on the TrädCase when the iPhone is not securely mounted, as this can damage the TrädCase and/or its wood buttons. After your iPhone is mounted you can press on the wood buttons to control the on/off switch and volume controls.
