

INSTALLATION

(1) Put the ringer switch of your iPhone to the 'On' position.

(2) Lay the TradCase on a flat surface. Place the left-top side of the iPhone at a slight angle into the top half of the TradCase. (Inserting the iPhone at an angle is to insure that the sharp edge of the ringer button does not catch and tear the material liner of the TradCase.)

(3) Rotate the iPhone until it properly aligns with the TradCase.

(4) Supporting the TradCase with your thumb and forefinger, slide the iPhone all the way into the TradCase. Be especially careful that the ringer button does not catch on the material liner of the TradCase when it reaches the area of the volume control buttons.

(5) Take the bottom half of the TradCase and slide it over the bottom half of the iPhone until it snaps in place.

NOTE:

Premium hardwoods are carved to a thin shell so that your TradCase can protect your iPhone without adding noticeable weight or bulk. Care must be observed during installation of the iPhone. In particular, please do not bend the TradCase or press the volume and on/off switch buttons until the iPhone is installed properly. Also, do not put pressure on the top or the bottom of the TradCase where the wood has been cut out for the charger and earphones.

Once your iPhone is installed, all the features of your iPhone are accessible and the TradCase will provide lasting protection for your iPhone.
